RECRUITSAGE SENSEI

Today: one job mission, end to end

Personal-use sprint | 30 Oct 2026 | target: a working flow, not a platform rebuild

Ship outcome

Pick one real job -> inspect evidence -> judge resume -> prepare a truthful copy ->
apply through a verified route -> confirm status -> begin Sensei practice.

Keep the mission, source links, resume version and practice history in SQLite.

Build order - about 7 focused hours

0-60 min — **Choose mission + lock evidence**
Live job detail, eligibility, deadline, current application state, Gmail links.

60-150 min — **Resume critic + tailored copy**
Flag unsupported/weak lines; edit a copy; check layout and PDF output.

150-270 min — **Application path**
Discover required fields and upload flow; dry run; submit one job if verified.

270-360 min — **Sensei + adaptive prep**
JD fundamentals, resume defense, saved gaps, time-to-deadline priorities.

360-420 min — **Real end-to-end check**
Verify portal status, resume used, next-session recall and nudge timing.

Release gates

1 No invented resume claim. Original file retained; edited version is reviewable.

2 No duplicate application. Submit only to an eligible, open, unapplied job.

3 "Applied" means the portal returned a durable application record.

4 Unclear portal flow or CAPTCHA stops submission; mission stays ready to finish.

5 Sensei uses the actual JD and submitted resume, then recalls recorded gaps.

6 Urgent action timing follows verified deadlines and remaining prep time.

Current position and decision points

READY Read-only RecruitSage/Gmail sync, sourced briefing, resume import and Sensei memory.

BLOCKER No verified application-submit route yet; resume layout editing is not built.

Today we prioritize one successful mission over broad autonomous job coverage.

Email digest removed. Mac notification did not visibly arrive; do not count it as delivery.

Resume from this plan: complete the first unchecked gate, update evidence, then continue.
